Colour Temperature & Lumens

Colour temperature/Kelvin (K) is a measurement of the warmth or coolness of light.

The look and feel of a space can be greatly affected by colour temperature. Therefore, it is important to choose the right colour temperature based on the mood you want to create.

Based on the (K) numbered scale, the higher the colour temperature, the cooler, more energising light will be.

A lower colour temperature will produce a warmer, more relaxing glow. The colour temperature (K) should be considered carefully to satisfy a room's desired purpose, mood and style.

**Lumens Explained: (lm)** are a measure of the total amount of visible light (to the human eye) from a lamp or light source. The higher the lumen the "brighter" the lamp will appear.

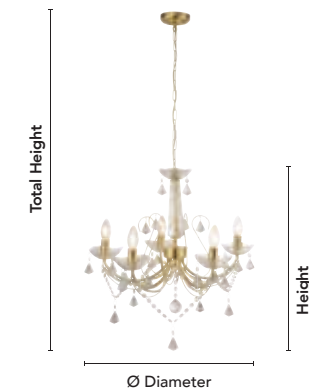

**NOTE: All Kelvins and Lumen outputs (raw data) are quoted with a tolerance of 10%**

**Candle Light 1800K**      **Warm White 2700K-3000K**      **Daylight 6500K**
